

5 WAYS Gold Loan Errors Are Losing You Money

A short, practical guide for jewellers who still manage gold loans and Bhishi schemes on paper — and what it's quietly costing them.

WHY THIS GUIDE

Small errors, big losses

Most jewellery shops still track gold loans and Bhishi collections in diaries, loose papers, or spreadsheets. It works — until it doesn't. A torn page, a wrong interest calculation, or a forgotten due date can quietly cost a shop thousands of rupees every month, in ways that never show up until it's too late.

This guide walks through the five most common (and most expensive) mistakes we see in shops that still run on paper registers, along with the simple fix for each one.

INSIDE THIS GUIDE

01 Manual interest calculation mistakes

Small errors that overcharge or undercharge customers

02 Lost or damaged paper records

One spill, tear, or theft and months of data are gone

03 Missed loan due dates

No reminders means delayed repayments and cash flow gaps

04 Inconsistent or missing receipts

Handwritten receipts create disputes and lost trust

05 No real-time view of your business

Not knowing your total outstanding until you count by hand

MISTAKE

1 Manual interest calculation mistakes

Even a 1% error, repeated across 50 loans a month, adds up fast.

When interest is calculated by hand for every loan — daily or monthly, at different rates for different customers — small mistakes are inevitable. An overcharge damages trust and can invite disputes. An undercharge quietly eats into your margins, loan after loan, without anyone noticing until year-end.

THE FIX

Automatic interest calculation removes the guesswork. Every loan uses the correct rate and method, calculated the same way every single time, with no room for arithmetic slips at a busy counter.

MISTAKE

2 Lost or damaged paper records

A torn page, a spilled cup of chai, or a stolen register can erase months of data.

Paper has no backup. If a register is lost, damaged, or simply misplaced during a shop move, there is no way to recover the loan history, customer details, or payment records it contained. For a gold loan business, that's not just inconvenient — it's a direct financial and legal risk.

THE FIX

Every record is encrypted and backed up securely in the cloud. Even if a device is lost or replaced, your loan history, customer records, and receipts are restored instantly — exactly as you left them.

MISTAKE

3 Missed loan due dates

Every missed follow-up is a delayed repayment — and a cash flow gap you feel later.

Without a system to flag upcoming due dates, it's easy to lose track of which loans are approaching maturity, especially when a shop is managing dozens of active loans at once. Customers who aren't reminded tend to delay repayment, which slows down cash flow and makes planning difficult.

THE FIX

Set reminders once, and they run automatically — notifying both you and your customers before a due date arrives, so follow-ups happen on time, every time.

MISTAKE

4 Inconsistent or missing receipts

A handwritten receipt that doesn't match your register is where disputes begin.

Handwritten receipts are easy to lose, hard to standardise, and create an obvious gap in the record whenever one isn't issued. When there's a disagreement over what was paid or pledged, an inconsistent paper trail makes it much harder to resolve.

THE FIX

Generate a professional digital receipt in seconds and send it straight to your customer on WhatsApp — no printer required, and every receipt is saved against the loan automatically.

MISTAKE

5 No real-time view of your business

If you can't see your numbers instantly, you're making decisions in the dark.

With records spread across registers and loose papers, getting a simple answer — total outstanding loans, overdue accounts, this month's collections — means manually counting through pages. That's time you don't have, and by the time the count is done, the numbers have often already changed.

THE FIX

See total outstanding loans, overdue accounts, and this month's collections and profit in one tap — no accountant, no manual tally, no waiting.

"I used to spend 2 hours every evening updating loan registers. Now it takes 10 minutes." — Ramesh Soni, Gold Jeweller, Pune

THE TAKEAWAY

None of these five mistakes happen because anyone is careless. They happen because manual systems were never designed to keep up with a busy shop counter, dozens of active loans, and monthly Bhishi collections all at once.

Ledger Book was built specifically for gold jewellers to close these gaps: automatic interest calculation, secure cloud backup, due-date reminders, digital WhatsApp receipts, and instant business reports — all in one place, set up for you at your shop counter.
